

Top 10 Things You Should Know Before Buying Access Control!

1. Ease of use

Is the system user friendly in that navigation, setup and the execution of tools and procedures can be done easily with minimal training and support?

2. Ability to access the system remotely

Does the system include functionality which enables the application to be accessed remotely from other internal and external workstations and can this be easily accomplished with minimal support from your IT department?

3. User management & accessibility

Does the system offer tiered administration and can the system be accessed and managed by multiple users simultaneously?

4. Reporting Capabilities

Does the system have the ability to efficiently generate both standard and custom reports that are easily interpreted? Can you quickly and easily run a report?

5. Multi-site connectivity

Can a user access multiple sites simultaneously and run a single report for all buildings and areas? If a site is added in the future, will there be compatibility issues with the software?

6. Information backup and restore

Does your system include automatic data backup or are you required to purchase additional hardware and delegate staff to perform weekly backups? What will be the cost to your organization if the system and its data need to be restored? Is data being backed up on or off site?

7. Schedules and Notifications

Can schedules and notifications be set up easily and efficiently without having to apply additional network settings and multiple parameters?

8. On-going system maintenance

What type of maintenance can you expect? Will this maintenance allow you to easily and efficiently update your software when new versions become available or in the event that your system needs to be restored or serviced?

9. Support, training and help

What kind of support can you expect from you're your system or system provider once the warranty has expired or in the event that staff require new or additional training?

10. Product updates and compatibility between old and new systems

How often can you expect software updates and are these included in your maintenance agreement at no additional cost? Can these updates be applied quickly and efficiently.

Double Vision Group Inc. is a leading provider of advanced IP security solutions, helping customers of all sizes to protect and secure their premises. The comprehensive security solutions offered by Double Vision extend from standard CCTV and Card Access Systems to fully scalable IP based High Definition Video Surveillance and Access Control Networks.

Double Vision's commitment to being ahead of the technology curve and staying focused on real-time security solutions enables customers to benefit from the true potential of their security system.
